

SOMETHING ELSE

(an excerpt)

Deep End Summary -

All of the really deep problems we face in life boil down to a single factor: human limitation. The world is just a mirror, a direct reflection of all the people that make it up, and will never fundamentally change until the people change. But this also points to the foundation of what this emerging paradigm offers. The strength of it is that it points to a method of collectively bypassing individual human limitation in a way that will allow normal people to pass through a particular process of deep level personal change - firstly in the most efficient and effective manner possible, but most especially in a way that remains within their personal pain or willpower threshold.

Importantly, this is a potential they did not even know exists, and which - even if they did know - would always have remained beyond their ability to reliably access, not without some kind of highly developed collective support. And this is what changes at this point: The emerging anatomy lays out a very clear pathway for such cultural development, and thus places the possibility of very great and sudden change in the hands of just a smart and brave few.

This combination is very rare even in relation to something very small, let alone something so incredibly massive. It is almost unheard of for something to come along that gives great power to an intelligent and benevolent few, rather than the typical situation wherein all significant outcomes are determined by the blind and ignorant masses. Very few potentials ever emerge that harness the same forces that currently drive the downward spiral, and thereby turn them into a force for good - like a mythical alchemist turning lead into gold.

Laziness, selfishness, greed, pleasure - these are the things that will drive this great wave once the transition becomes openly available. And making that process accessible is now within the reach of anyone with the capacity to confidently wield this heavy theoretical axe, most especially if those people are able to get together with others to lift it. They need only to deeply examine the blueprint, and then get together to build what it defines.

In the end, the particular process of change indicated needs to only be placed within the emotional and practical limitations of the typical person, even just once, and the floodgates will open. But the typical person is also not going to be much use to us up until that point is reached, because it is only at that stage where their own limitations will have been able to be accounted for and overcome in any practical way.

What does it all mean in the first instance, then? It means that at least a few will need to dare, and go where others will not go. And to begin that process what we need here is a complete and sufficiently finished body of work that details all the various aspects of the associated territory, in language that fits those who will do that vital work. But it also means that we can't start off with that complete resource at first, because any such work can itself not be formulated or refined until we know exactly who we are talking to at that final level. It will need to be bounced off those people repeatedly in order to find its true voice, so to speak.

Essentially, and before I will ever be able to write about it in any valuable sense, I will need to first of all explain it to people. And to do that again and again. But in order to even begin that process I will first of all need to write about it, at least very roughly, as I am doing here.

It is a kind of catch 22, then. An impasse. Like the proverbial 'lifting yourself up by your shoelaces'. And this is the deadlock we will be seeking to break here, after so many years of being so completely stuck.

The entire event is basically a search now, perhaps this is becoming clear. In one sense it is a search for the right message, but more importantly it is a search for the right audience. And you don't need to carry all of those mutations in order to be valuable to those who do. You should feel sorry for those freaks. They may eventually change the world in this context, but boy will they have suffered along the way. In a bent world a straight person will appear bent, and it's always the one person with strong immunity in the leper colony that gets burned at the stake for being 'too different'.

We will actually get to see who these people are in due course here, as we begin to pin our own anatomy out like a frog in a science class, to see all the variations of the disease we suffer from. At every point we will see a distortion, an affliction of sorts, but also another point at which any person might have managed to maintain a degree of integrity.

You might even find that you yourself have managed to do that, but the chances that you will find this at every one of those various points would be like winning a very dark lotto. You will be able to see for yourself in any case, as we begin to lay each aspect out one by one. They don't necessarily make you a better person, any more than being tall does. But being tall does make you better at basketball, and this is a bit like that - a very particular game suited to a very particular kind of person.

In the end the key is this: The whole thing needs to somehow account for the fact that both interest and comprehension of this particular aspect of life are presently being actively undermined by powerful and very dynamic unconscious forces in the reader - forces that can be overcome, but only if they are confronted in an equally dynamic and powerful way.

Those unconscious forces, remember, are the very thing being explained - so it all requires a kind of 'emotional judo', which a 'passive book' can never easily provide. Not unless the reader is extremely well prepared in this sense, which very few are, and not unless that book has itself been developed in the wake of being exposed to a great deal of feedback and scrutiny over time, which none have at this early stage.

That outcome is a process of sustainable and ongoing dialogue with the right people, but to reach that higher stage we first of all need to start off at a lower level, a bit like lighting a fire.

First of all you need a little bit of fluff to receive the initial spark. Then you need the wood shavings, then you need the kindling, then the branches, and only at the end do you get to burn a log. But at each stage the same basic process is occurring, the same critical rebound.

A book cannot do this, because a book is a finished thing. The whole point of such formative dialogue is that it must be driven and directed by the audience, not by the author. After all, the author in such a situation already knows what is being explained, but only in terms that match their own narrow and highly informed worldview, so it is the audience that holds the key to that understanding being reliably conveyed. And yes, the story may well begin to take a certain form over time, as people repeatedly find the same path through whatever territory is provided by the author. Which may eventually consolidate into a single solid narrative over time. But none of this will be achieved by the author, it is all in the hands of those offering feedback and guidance.

A book, then, can only be the end result of such a process, not the beginning of it.

Therefore, the best we can do from a standing start here is to establish some kind of dialogue, any kind really, provided it is actually working (going both ways) and as long as everyone basically knows what's at stake right from the start - and then to eventually move that conversation into deeper and deeper waters as those who can truly swim begin to show up and demonstrate that ability.

'Swimming' in this context merely means asking the right questions in the first instance, or even just offering general impressions, although later the demands become much more significant for anyone who decides to pursue it that far.

When I used to conceive a primer for that final level of development as being a 'finished thing', I generally called that big and heavy resource - 'The Hard Book'. That foundation will need to provide all the basic theory, and in sufficient detail to directly empower those with the ability to take it forward from there on their own. And the whole point of that book was to take me out of the picture, rather than place me very firmly back in as we see occurring here now.

I have written variations of that book about four separate times now, some of them two inches thick, but by all accounts completely impenetrable to the average person.

As I say, I had no idea who I was speaking to back then, so I was just sort of shooting blindly. Even now we have no idea who these rare people are, or where they are, so those works all ended up like bridges that just sort of hung in space at the other end.

This is what writing is like when you don't know who you are talking to - it is basically impossible.

What we see now, however, is that this big primer is itself becoming a process - an evolving and changing event. A living entity almost; never finished, and always growing. And this important shift opens up a world of possibility on the one hand, but also generates a few interesting problems on the other, as we have seen.

Anyway, let's call the level of development this heavy primer supports and allows for - 'stage three'.

It is implied by that stage that all those participating will have been both fully informed, and well prepared, and that they will also be working together in some sort of meaningful way. That is the endgame here, and reaching that level of engagement by the fastest possible route will be the aim of everything we will be doing. That stage is the real event, and is not preparation for anything else.

By that point we are actually baking the cake, not just playing around with the recipe, so there will be a lot more going on than merely talking about it. But how do you reach that level, when no such primer is yet available.

Once again, developing the heavy primer required to empower that final stage will itself require some sort of personal exchange. In particular it will require dialogue and feedback from just the right sort of person, and in just the right sort of context.

Due to the full and detailed foundations required even at that level, things will already be narrowed down in terms of who will be able to meaningfully participate, based mostly on the demands associated. So that is also not what we will be doing here at first.

Developing stage three's primer will be what we might call a 'stage two' conversation. And hopefully you are following me here. That medium level dialogue will itself demand some sort of introduction, if that makes sense.

At some point there needs to be a 'stage one'. And this, finally, brings us back to where we stand now, and what makes this initial dialogue different to everything that will follow.

The eventual result of this initial level of conversation will be what I have always tended to call - 'The Easy Book'. That work, when it was finished, was always going to be merely a very rough introduction to the Hard Book. And once again I have written that particular book maybe half a dozen times over the years, in various forms - but none of them ever published due to 'lack of comprehension' in any test audience. But that level too becomes a process now, rather than a finished object, in a far more dynamic effort to overcome that psychological and cultural barrier.

All of which brings us back to what you are presently reading, and the very simple process of dialogue you are being invited to participate in. It turns out that even what we are calling Stage One here - where you might get to chew over some part of a manuscript for the Easy Book etc - is itself not immediately accessible to most people. Which is why we need to take the time to first of all practice this even simpler breakdown again and again now, until we get the collective heat required.

So what you are reading now is, most correctly, a Preface to the Introduction to the Primer for the true and ongoing final conversation - which is the only thing that really matters in this instance. Not a log, not the branches, not even the kindling - this is just a tiny bit of fluff to get us going.

Therefore, that's what you will get here now. What you see here is not the dialogue we will be aiming at ultimately. For that level you will be welcome of course, but you will also need to qualify, based mostly on how fully you grasp it all at the early stages, which will in turn determine how much you enjoy the whole thing. Most of all you will only still need to be interested by the time we reach any particular depth, which is something only you can decide for yourself - based mostly on whether or not you can still keep your head above water at that level. Your own degree of engagement at each stage will be what determines that progress I suppose, so that will be up to you. Only you can say.

Therefore, to get that all rolling, all we need here is ignition, not a fire. Which is the whole point of the first level we are about to begin - we can practise this very simple sketching again and again here, and at very little cost in terms of either effort or danger.

That's why it can be so light and casual - the whole point is that it should be easy. It does not need to be anything in and of itself, provided it leads to the next level up in due course.

This is the moral exemption it offers, and this is what makes it fun for anyone who is offered the possibility of exploring all of this in direct conversation. Your only obligation will be to make sure you understand it at this cursory level. Because if you can help me to make sure you truly grasp the whole thing, even just in its outlines, then you will have immediately assisted in the production of something that prepares others for the next level up, where the stakes will be much higher.

So this is how that works, and this is where you get to slip the noose of moral obligation if you wish: It is only the outcome that matters in this instance, and if we reach that outcome in the end, then you will have done your part.

Your responsibilities here will be few. That is my gift to you, provided you are able to make some sort of meaningful contribution to its welfare as a seedling. And all you have to do is look, and see, and chat - and even then only up to whatever depth you feel comfortable. How hard could it be?

In other words, with every aspect you truly understand, your moral obligation will be released, rather than assumed, because the ethical hot potato will be passed up the chain due to the cumulative value of such discourse at my end. Which is of course backwards. Anyone who simply reads the finished articles, without being involved in their development, will not experience the same thing at all. For those people, any associated empowerment will lead directly to obligation. With power comes responsibility, etc. That is the way of things after all, unless you have no moral backbone whatsoever. And the empowerment in this instance is both substantial and very direct.

So this is where we will begin now - with just this one little piece, again and again. Just grab this simple handle and crank. Nothing else for now. We first of all need to very firmly establish this one small missing bit, and in very direct and personal terms.

Either way, you can probably take solace in the fact that you are likely not one of those eventual few. We are only going to start off with a very small bite here, and in that sense you will merely be their eyes and ears in the first instance, which is not a difficult task. If you see, they will see. If you hear, they will hear. But for you, unlike them, both of those things will be free.

So all I need to see at this level is that you are getting it at this level, nothing more. But even at that next level the same exemption will be true, so you will be welcome to continue if you wish, on the same basis. That stage will simply be a much closer look, that's all, and in far higher resolution. But the same exemption will apply to anyone who assists in tuning it, for as long as it is still developing. It is your own meaningful contribution to that forward movement that otherwise keeps your moral slate clean.

Essentially, the only thing that matters is that we get the opportunity to engage with those rare few who have what it takes in this instance, and for them to then have the option of having the entire thing 'personally fitted' through detailed dialogue with me directly. Because if that can happen, even once, then we will have the foundations down for the true development to begin - which will not necessarily involve you at all, nor me, and will not need to. So if whatever feedback you may offer here assists us in reaching that point then you will have done your part, and can certainly claim to have been part of it.

The benefit of this more direct and engaged approach is that it can also be a lot more relaxed and casual, therefore. Even this, the outline you are reading right now, is just something I am scratching out on my phone between changing nappies and fixing machines. It is not a finished thing, just a very rough starting point, and only your own feedback will allow it to become better.

In terms of the associated dialogue being indicated, all of these levels can exist at the same time, and each one may continue to develop without any obvious limits. Although, it is equally true that you don't tend to piss about trying to ignite a bit of fluff once you have a flame already.

This initial level is vital, however, because you need to be able to start again occasionally. And when you learn to juggle, you start with just one ball, so that's where we are now.

It may not be for you, however, not at that level. I think we should have established this clearly enough by now. You may not be a 'log' in this emerging fire of change. It is possible, but fortunately that is not necessary now. And that's what makes it light and easy.

So this is a rare opportunity, for whatever it's worth, because I can't do this with many people at the same time. It is only going to happen once. But for as much as the subject matter is so heavy, it should still be very interesting in this lightweight and casual format - for me and for you also.

For me it is like being an archaeologist who has been working on a massive site for many years. But instead of introducing people to the muddy reality of such work, it is as if I am now getting to take just a few friends up in a helicopter, up and over the entire thing, a free tour in a sense. There will be no digging involved. You will even get to give the pilot directions so that you can make sure you see it all properly.

This is where we are now. Even this invitation is not being directed by me - that's the whole point. So don't just sit there. Speak up. What doesn't make sense here? Help me adjust this so as to be even more effective, even at this level, in just the same way as others have done before you. Could I be saying all of this in a better way?

In any case, you will find out soon enough whether or not you can swim here, and can decide for yourself how deep you want to go beyond this initial snapshot. But the fact is this - you are most likely going to look down on all of it from a great height at first, and think - "wow, that's unbelievable, truly amazing, suddenly a whole lot of things make a lot more sense, but still - thank fuck I'm not down there digging!!"

That's what makes those rare few a log. They will see it and leap straight out of the helicopter. They will already have a well worn ethical shovel in their backpack, and you won't be able to hold them back. Like me, it will simply be what they were born to do.

But that's not where we begin, because - as I say - those people are rare and very hard to identify. Their weird superpowers are latent in this context, and they won't even know they carry them until the right story brings it all forth and suddenly sets them alight. What might make you a giant in this new world may even have been deemed a crippling and worthless disability in the world we see today.

But for you, as you start off in the shallow end now, things will be completely different.

For example, my friend is already out here. He did his bit here already, in just one day, and as a result got a front row seat, permanently. Total legend. And the same for the others I have tested this brief chat out on just to make sure we are 'every time a coconut' now, which certainly appears to be the case.

That's the deal. Anyone courageous enough to offer even a minor bit of feedback that makes a meaningful difference to the whole thing will immediately get a backstage pass. But it is also why this offer to have it all explained directly in conversation will only ever be made to a very carefully chosen few. So if you are even reading this, then you are already rare indeed, one of just a handful.

The point is - there will be an absolute feeding frenzy once people do finally begin to see what it all brings to light in directly practical terms, and how fast it could all happen. It will inevitably hit that explosive threshold at some point. And by then we need to make very sure that all the relevant theoretical foundations have been securely established, and that all the necessary resources are available to those who select themselves as being up to such a daunting task. So we need to walk out ahead here, and put a few signs up.

Anyway, all we are talking about here is just an initial toe in the water. If you want to go any further than that then we will need more preparation. There is a lot more to know about that larger journey, and you will certainly need to have a few more items in your backpack in that case.

Either way, the blueprints are already there now. The recipe is obvious once you see the underlying structure of the situation, but the right people will need to be provided with the right information in the

right form, and also be connected with each other in some way, before we see any practical aspect emerge with force. And for that we need to merely begin. We have a shallow end of the pool now, and as long as you speak up and ask whatever questions are required for you to fully grasp whatever level you have chosen to engage, then that is your part done.

Only then will we begin to see the real event emerge here, as one thing leads to another and the constraints of a single individual pushing this ton weight up a hill on their own begin to lift at last. I mean, nobody ever did get to see what might have happened if only poor old Sisyphus finally did get some fucking help! That poor bastard apparently didn't have any friends.
